Model 110

Model 120 w/video

Automated Video Information Channel

Born in the second millennium, the Model 110 is a FRESH & NEW approach to automated Video Information Channels. Model 110 utilizes all of the latest and advanced hardware technology of today's economical platforms. Produce professional channels of constant or scheduled video information for a mere fraction of the investment usually needed for broadcast level quality.

Specifically designed for the needs of Gated Communities

FEATURES

- PC Windows remote/off-channel editing and communication software available (local , network access, or modem access)
- Automated screen display time calculation
- Background Music Channel (Auto replay CD)
- Multiple display lists of screen information
- Separate Time/Date display region
- Easy and fast channel & page content creation with PREVIEW before send
- Two separate text message areas
- Automated Date and Time scheduling of individual pages .

Graphic/Logo Corner Included

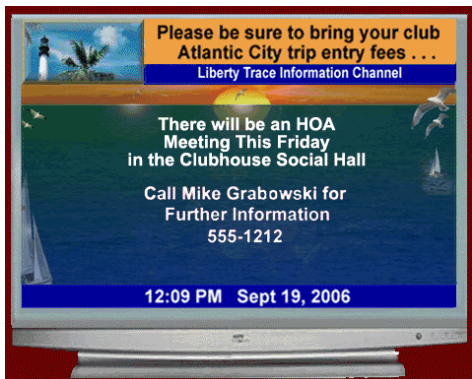

Import interesting digital photographs or images from your Community and display as a slide show

GC-110 Model L and R has now brought professional video information channel creativity into the realm of all budgets. Extremely sophisticated presentations are effortlessly and quickly composed using the optional PC Windows editing and transfer software with PREVIEW before updating your channel .

Updating your channel is a simple matter of clicking a mouse and transferring your new pages effortlessly offline via phone line, network, or direct serial cable.

The **GC-110 R** editing process is completely off-line and may be sent to the display unit transparently. This “batch-transfer” process allows the operator to update the channel content completely at their leisure and is only connected to the display unit during the duration of the transfer process .

The **GC-110 L** is a completely self-contained local insertion unit that offers both the editor and display unit in a single unit. What could be better ? **GC-110** – for the Information Channels of today using the Technology of Today.

EDITOR SOFTWARE (R) – An application for your PC (optional) Compatible with any PC utilizing Windows 95/98/NT/2000/XP. All page creation and scripting in a simple concise straight forward editor package as to allow the most pages and content to be created with the least amount of people-hours.

GRAPHIC & DIGITAL PHOTO CORNER – A separate area is provided to display single or paging digital images. These may be a Community Signature photograph easily imported to the screen or digital photos and highlights of people and their community in clear view away from distracting text announcements.

DATE/TIME PAGE SCHEDULING – Simple to use page based from/to date scheduler. Merely fill in the two calendar dates and the page will automatically display between these two dates. In addition to auto date display you may also denote a daily time slot for that page. In the default state all pages will show all of the time, nothing to do but compose and send.

DATE/TIME LINE – HEADER LINE –Two fixed areas that allows the date and time to be displayed independent of all page areas as well as an overall Header Line. Set once, activate, and forget !

AUTOMATIC PAGE TIMING – Very simple – the more you type on a screen page, the longer it dwells on the screen until the next page is queued . Adjustable rate and can be overwritten by manual dwell time entries. A real time saver !
